I hereby give my consent to Imaging Specialists of Charleston to perform an MRI as ordered by my physician. Sometimes MRI requires an injection of contrast. MRI contrast (gadolinium) is administered through a small needle placed into a vein. During the administration of MRI contrast (gadolinium), you may experience the sensation of the contrast being injected, which is normal and expected. MRI contrast (gadolinium) is quite safe, however as with all medications, there is a slight risk of an allergic reaction. The physicians and staff in the MRI Department are trained to respond to any emergency situation that may develop. In addition, we use the safest MRI contrast, which our physicians believe is best for you.

I have read and understand the above information and my questions have been answered. I consent to the use of paramagnetic contrast.
